

Brainstorming & Ideation Phase

Page 1 of 10

Introduction to Brainstorming

Introduction to Brainstorming

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **introduction to brainstorming** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to introduction to brainstorming. The output can then be used as an input for the next project activity.

Identifying the Problem

Identifying the Problem

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **identifying the problem** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to identifying the problem. The output can then be used as an input for the next project activity.

Brainstorming & Ideation Phase

Understanding the Target Users

Understanding the Target Users

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **understanding the target users** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to understanding the target users. The output can then be used as an input for the next project activity.

Generating Ideas

Generating Ideas

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **generating ideas** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to generating ideas. The output can then be used as an input for the next project activity.

Brainstorming & Ideation Phase

Brainstorming Techniques

Brainstorming Techniques

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **brainstorming techniques** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to brainstorming techniques. The output can then be used as an input for the next project activity.

Evaluating Ideas

Evaluating Ideas

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **evaluating ideas** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to evaluating ideas. The output can then be used as an input for the next project activity.

Brainstorming & Ideation Phase

Selecting the Project Idea

Selecting the Project Idea

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **selecting the project idea** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to selecting the project idea. The output can then be used as an input for the next project activity.

Creating the Initial Concept

Creating the Initial Concept

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **creating the initial concept** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to creating the initial concept. The output can then be used as an input for the next project activity.

Benefits and Common Challenges

Benefits and Common Challenges

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **benefits and common challenges** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to benefits and common challenges. The output can then be used as an input for the next project activity.

Phase Summary

Phase Summary

This phase converts a problem or opportunity into a clear project idea. The team explores different possibilities before choosing a practical concept.

This page focuses on **phase summary** as part of the brainstorming & ideation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to phase summary. The output can then be used as an input for the next project activity.
