Introduction to Development

Introduction to Development

Development turns the approved design into a working product. Developers create features, integrate components, review code, and prepare a build for testing and deployment.

This page focuses on **introduction to development** as part of the project development phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to introduction to development. The output can then be used as an input for the next project activity.

Setting Up the Development Environment

Setting Up the Development Environment

Development turns the approved design into a working product. Developers create features, integrate components, review code, and prepare a build for testing and deployment.

This page focuses on **setting up the development environment** as part of the project development phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Coding Standards

Coding Standards

Development turns the approved design into a working product. Developers create features, integrate components, review code, and prepare a build for testing and deployment.

This page focuses on **coding standards** as part of the project development phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Implementing Core Features

Implementing Core Features

Development turns the approved design into a working product. Developers create features, integrate components, review code, and prepare a build for testing and deployment.

This page focuses on **implementing core features** as part of the project development phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
