

Project Documentation Phase

Page 1 of 10

Introduction to Documentation

Introduction to Documentation

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **introduction to documentation** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to introduction to documentation. The output can then be used as an input for the next project activity.

Project Overview

Project Overview

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **project overview** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to project overview. The output can then be used as an input for the next project activity.

Requirement Documentation

Requirement Documentation

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **requirement documentation** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to requirement documentation. The output can then be used as an input for the next project activity.

Design Documentation

Design Documentation

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **design documentation** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to design documentation. The output can then be used as an input for the next project activity.

Development Documentation

Development Documentation

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **development documentation** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to development documentation. The output can then be used as an input for the next project activity.

Testing Documentation

Testing Documentation

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **testing documentation** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to testing documentation. The output can then be used as an input for the next project activity.

User Manual

User Manual

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **user manual** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to user manual. The output can then be used as an input for the next project activity.

Installation and Maintenance Guide

Installation and Maintenance Guide

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **installation and maintenance guide** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to installation and maintenance guide. The output can then be used as an input for the next project activity.

Formatting and Review

Formatting and Review

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **formatting and review** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to formatting and review. The output can then be used as an input for the next project activity.

Project Documentation Phase

Page 10 of 10

Final Documentation Checklist

Final Documentation Checklist

Documentation records the project in a clear and reusable form. It helps users, developers, teachers, evaluators, and future maintainers understand the system.

This page focuses on **final documentation checklist** as part of the project documentation phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to final documentation checklist. The output can then be used as an input for the next project activity.
