

Project Testing Phase

Page 1 of 10

Introduction to Testing

Introduction to Testing

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **introduction to testing** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to introduction to testing. The output can then be used as an input for the next project activity.

Test Planning

Test Planning

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **test planning** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to test planning. The output can then be used as an input for the next project activity.

Unit Testing

Unit Testing

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **unit testing** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to unit testing. The output can then be used as an input for the next project activity.

Integration Testing

Integration Testing

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **integration testing** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to integration testing. The output can then be used as an input for the next project activity.

System Testing

System Testing

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **system testing** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to system testing. The output can then be used as an input for the next project activity.

User Acceptance Testing

User Acceptance Testing

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **user acceptance testing** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to user acceptance testing. The output can then be used as an input for the next project activity.

Testing Summary and Sign-off

Testing Summary and Sign-off

Testing checks whether the developed system meets its requirements and works reliably. Problems are recorded, corrected, retested, and tracked until the product reaches an acceptable quality level.

This page focuses on **testing summary and sign-off** as part of the project testing phase. A project team should approach this activity systematically, record important decisions, and connect each decision to the overall project objective.

Key points

- Define the purpose clearly before starting the activity.
- Identify the people, information, tools, and resources involved.
- Record assumptions and decisions so that the team has a common reference.
- Review the work with team members and make improvements when necessary.

Practical approach

Start with the project objective and then break the work into smaller, understandable actions. Use simple tables, diagrams, checklists, or examples where appropriate. Keep the work realistic for the available time, skills, and resources.

Example

For a student project such as a college event management system, this activity could include defining users such as students and coordinators, identifying the information they need, and deciding how the system will support registration, schedules, notifications, or reports.

Expected outcome

At the end of this activity, the team should have a clear and reviewable output related to testing summary and sign-off. The output can then be used as an input for the next project activity.
